iCeNSA Job Description: Data Analyst and Manager

This position is responsible for creating and maintaining the wide variety of relational databases used by iCeNSA faculty and researchers, and assisting iCeNSA researchers in querying, extracting, reorganizing, using and analyzing such data. Applicants for this position should have a PhD in computer science, applied mathematics or a social science discipline (with a strong emphasis on computational social science). Applicants should be very familiar with relational data sets, especially very large relational data sets, including the various types of data obtained on networks, including social networks. Applicants must have programming skills and good facility with programming languages such as C++ and Python. Applicants should also have good working knowledge of statistical software used to analyze and visualize networks such as R (Statnet/ERGM), RSiena, UCINET, and NodeXL. Because iCeNSA is an interdisciplinary research center, applicants with experience working with researchers from various disciplines within the sciences, social sciences, and engineering are preferred. This will be a full-time (40 hours per week), full-year position.
